

SKIRTING

Fleece as it is removed from the alpaca must be picked and skirted before sending it to a show or processing mill.

This clinic gives hands on demonstration and discussion in this often misunderstood task. Learn to identify neck side, tail side, belly fiber, second cuts and more. We will look at the fleece as it might be judged and see what a judge might see and go over the showing requirements as published in the AOBA 2007 Show Rules Book.

During this clinic we discuss and demonstrate proper rolling and bagging of your fleece for show. Various fleece storage methods are presented with samples of different bags, boxes and containers. Discussion of tools and types of skirting tables will also be included.

Bring your questions, tips, and techniques to share.

CLINIC LIMIT - 15 participants

CLINIC LENGTH - 4 hours

This clinic can be held on your farm, at a show or at a conference.
